AI-Workforce Enablement and Readiness Assessment

Senior Leader Executive Lite Feedback Report

EXECUTIVE LITE REPORT

Participant: John Doe

Role: Vice President

Date: Sample report

Report Type: Senior Leader Self-Assessment
(Executive Lite) + AI Fluency Check

Report Version: v1.0

1 Introduction

This is the Executive Lite version of your AI-Workforce Enablement and Readiness self-assessment — a short-form check covering select parameters from each of the five core modules, plus a brief AI Fluency check.

The complete assessment measures 5+1 overarching factors — the five scored modules covered below, plus an AI Fluency check reported alongside them — across 26 distinct parameters in total. This Lite version measures a small, fixed subset of those 26 (9 parameters here) to give a quick, directional signal. It is intentionally less rigorous than the full assessment, not a substitute for it.

Because this is an abbreviated assessment, this report measures fewer parameters than the full assessment. Sections below clearly mark which specific items were measured and which were not. Where something was not measured, no score is shown or implied — a fuller picture across all parameters is available through the complete assessment.

2 Executive Snapshot

Figure 1. Executive Snapshot — Module Scores and Coverage

Module	Score	Coverage
AI Leadership Competencies	4.25	2 of 7 parameters measured
Ability for Change	3.5	2 of 6 parameters measured
Change Readiness	3.0	2 of 4 parameters measured
Organizational Enablers	2.0	2 of 6 parameters measured
Psychological & Motivational Readiness	5.0	1 of 3 parameters measured
Overall (Lite) Readiness	3.55	Average of measured parameters only

Note on Overall Readiness: this figure is the average of only the parameters actually measured in this Lite Assessment. It is not directly comparable to an Overall Readiness score from the full assessment, which draws on all 86 items.

3 Overall Readiness Profile

Figure 2. Overall Readiness Profile (Lite) — Module Averages

WHAT THIS PATTERN SUGGESTS

Personal readiness (average 4.12) is a genuine strength; organizational conditions (average 2.17) are the real constraint.

A Note on This Analysis

This synthesis, like every section of this report, is built on a deliberately abbreviated data set. The Executive Lite Assessment trades off analytical depth and clarity for a dramatically shorter time investment — about 5 minutes, against 20–30 minutes for the full assessment. That trade-off is a deliberate design choice, not an oversight: it exists to capture a first, honest signal quickly, at the cost of the fuller texture, cross-checks, and reliability that only a complete assessment across every parameter can provide. Treat the pattern above as a credible starting signal, not a finished diagnosis.

Going Deeper

A more reliable picture emerges from data gathered across a whole team or organization, not just one individual. When multiple leaders complete the same assessment, a pattern that looks personal in a single Lite report — like the gap between personal readiness and organizational conditions above — can be confirmed or contradicted as a team-wide or company-wide condition, not just one person's perception. AIISV offers a full range of services to build that deeper picture and turn it into action, sized to organizations of every size and stage of AI adoption:

- Complete Individual and 360 Assessments across every parameter measured here, and every one this Lite version doesn't reach
- Organization-wide rollouts that reveal whether a pattern like this one is personal to one leader or systemic across the organization
- Facilitated off-sites that bring these findings into a live strategic conversation with the people who can act on them
- Customized training programs targeted at the specific gaps a deeper assessment reveals
- Comprehensive consulting engagements that carry an organization through the full arc of AI adoption, from initial diagnosis to sustained capability

4 Module Detail

Module A — AI Leadership Competencies

Coverage in this Lite Assessment: 2 of 7 parameters measured. The remaining parameters are shown below but were not part of this short-form assessment.

Figure 3. Module A — AI Leadership Competencies

Data Analysis: Both measured items are strong, and AI-Enabled Personal Productivity (4.5) is the higher of the two. This is a solid foundation on what's measured here. 5 related items (AI-Visionary Leadership, AI Scaled Agile Leadership, AI Organizational Transformation, Industry Disruption & Competitive Advantage, and AI Champions and Their Networks) remain unmeasured here, and would help clarify whether this pattern holds up at fuller scale.

Module B — Ability for Change

Coverage in this Lite Assessment: 2 of 6 parameters measured. The remaining parameters are shown below but were not part of this short-form assessment.

Figure 4. Module B — Ability for Change

Data Analysis: There's a 1.0-point gap between Remains effective amid high ambiguity (4.0) and Recovers and refocuses quickly after setbacks (3.0). That's worth noting on its own terms rather than averaging away. 4 related items (Learns new AI skills under time pressure, Helps others stay productive when path is unclear, Quickly adjusts approach when obstacles arise, and Breaks complex work into manageable steps) remain unmeasured here, and would help clarify whether this pattern holds up at fuller scale.

Module C — Change Readiness

Coverage in this Lite Assessment: 2 of 4 parameters measured. The remaining parameters are shown below but were not part of this short-form assessment.

Figure 5. Module C — Change Readiness

Data Analysis: This is where the first real, actionable gap shows up. Belief that AI is the right priority (Appropriateness, 3.5) is meaningfully higher than belief that the top team is actually backing it with real sponsorship (Management Support, 2.5) — a 1.0-point gap. That specific pattern, conviction outpacing perceived backing, often points to a ‘right idea, weak air cover’ situation rather than doubt about the strategy itself. 2 related items (Change Efficacy, and Personal Valence) remain unmeasured here, and would help clarify whether this pattern holds up at fuller scale.

Module D — Organizational Enablers

Coverage in this Lite Assessment: 2 of 6 parameters measured. The remaining parameters are shown below but were not part of this short-form assessment.

Figure 6. Module D — Organizational Enablers

Data Analysis: Both measured items land at the identical score of 2.0, the lowest tier in this assessment. Two independent items landing on the same low number is a stronger signal than either alone would be — it points toward a genuine, consistent condition rather than a one-off frustration with a single issue. 4 related items (People feel safe to experiment with AI, Active network of AI champions exists, Top team visibly aligned on AI priorities, and Adequate time, budget, and talent allocated) remain unmeasured here, and would help clarify whether this pattern holds up at fuller scale. Given how this compares to every other measured module, this is the strongest single argument for pursuing the full assessment here specifically.

Module E — Psychological & Motivational Readiness

Coverage in this Lite Assessment: 1 of 3 parameters measured. The remaining parameters are shown below but were not part of this short-form assessment.

Figure 7. Module E — Psychological & Motivational Readiness

Data Analysis: A strong score here — AI-Related Drivers & Values at 5.0 indicates a genuine, real asset, not just directional interest. 2 related items (Learning Orientation, and Response to Ambiguity & Pressure) remain unmeasured here, and would help clarify whether this pattern holds up at fuller scale.

5 In Your Own Words

Response to “What would you start, stop, or continue regarding AI?”

“See how it can apply to my business”

This response is shown exactly as submitted.

6 AI Fluency Knowledge Check

Overall Fluency Score: **2 of 3 correct (67%)**

Note: the Lite Fluency check reports an overall score from 3 fixed questions. Unlike the full assessment's 25-question check, it does not break General and Technical Fluency into separate section scores. Full question-by-question detail is in Appendix A.

7 Priority Development Themes

Note: these themes are drawn from a 9-parameter snapshot, not the full 26-parameter assessment. Treat them as signals worth investigating, not a complete diagnosis.

- 1 Close the gap this reveals:** Personal readiness (average 4.12) is a genuine strength; organizational conditions (average 2.17) are the real constraint.
- 2 Verify this before acting on it further:** Your self-rated readiness (Module A average of 4.25) runs ahead of your demonstrated AI knowledge (67% on the Fluency check) — worth exploring that gap directly rather than taking the high self-rating at face value.
- 3 Build on genuine strengths already in place:** AI-First Business Processes, AI-Enabled Personal Productivity, Remains effective amid high ambiguity, and AI-Related Drivers & Values are all real assets, not just adequate scores. Whatever the gaps identified above turn out to require, they are not a lack of personal capability or motivation.

8 Suggested Next Steps

This Lite report is designed to surface whether a deeper look is worth taking — not to replace it.

- 1 Complete the full AI-Workforce Enablement and Readiness Assessment** to see the complete picture across all parameters.
- 2 Add a 360 Assessment** to see whether others experience the same patterns found here.
- 3 Review this report** with an internal or external coach.

9 Components Being Measured

Definitions for the specific parameters measured in this Lite Assessment. See the full assessment for definitions of every parameter, including those not measured here.

Module A — AI Leadership Competencies

- **AI-First Business Processes, Products & Services:** Embedding AI into core work rather than treating it as an add-on.
- **AI-Enabled Personal Productivity:** Regular personal use of AI tools to produce real work and model productive AI adoption.

Module B — Ability for Change

- **Remains effective amid high ambiguity:** Ability to stay productive and decisive when the path forward is unclear.
- **Recovers and refocuses quickly after setbacks:** Ability to bounce back and regain momentum after failures or delays.

Module C — Change Readiness

- **Appropriateness:** Belief that accelerating AI adoption is the right strategic priority at this time.
- **Management Support:** Belief that senior leaders actively sponsor and remove barriers to AI transformation.

Module D — Organizational Enablers

- **AI vision and roadmap communicated clearly:** Clarity and consistency of communication about the AI direction.
- **Successful AI use cases are systematically shared:** Practice of capturing and spreading what works.

Module E — Psychological & Motivational Readiness

- **AI-Related Drivers & Values:** Underlying beliefs about whether AI primarily creates opportunity or threat.

Appendix A — AI Fluency Knowledge Check Detail

(Questions, John's Answers, and Correct / Incorrect Status)

Question	John's Answer	Correct Answer	Result
A hallucination in generative AI is:	A training method that introduces data from unknown sources	Confident but factually incorrect information	Incorrect
Bias in AI most usefully means:	Systematic error that unfairly favors or harms groups or outcomes	Systematic error that unfairly favors or harms groups or outcomes	Correct
In AI-SDLC, the preferred way to change system behavior is:	Modify the specification and let agents regenerate code and tests	Modify the specification and let agents regenerate code and tests	Correct

Overall Fluency: 2 / 3 correct = 67%

Appendix B — Respondent & Submission Details

Field	Value
Access Code	SLL-SAMP-0001
Respondent Email	john.doe@example.com
Product Line	Senior Leader
Overall (average of module averages)	3.55
